This report contains data analysis of the Terry School District student performance on the SMARTER Assessment. The SMARTER Assessment is given each year to grades 3 – 8 for ELA and math. The first section of this report provides a summary of analysis results obtained from the data listed throughout this document. In addition, the first section compares and lists the conclusions from the data analysis. The report documents ELA and math results for 2015, 2016, 2017, and 2018 by grade level for students in the district compared to the student profile for the entire state of Montana. The analysis utilizes the percentage of students scoring proficient and advanced in the district compared to the state wide results for the same group. The next section provides the district with a year by year comparison of proficiency district wide in ELA and math along with an overall view of results on the test over time. The following section shows the district sub group performance compared to the state of Montana results for economically disadvantaged students, by gender for female and male students, results for special education students, and results by race. Only subgroups of sufficient size are analyzed in the report. The report analyzes and shows student performance on the standards listed for both ELA and math by looking at student performance at/near or above the standards. The next step in the analysis compares results for each grade level over the years that the test has been administered and follows that by tracking results for a class through each grade level where they took the test. The percentage of students achieving proficient and advanced is used as a base line when comparing trends in each grade level. The report goes on to analyze and display areas of strength and weakness by students in each grade level for ELA and math based on results from the assessment.

Differences in OPI Release of Smarter Balanced Results and ORS Data

The OPI released official Smarter Balanced results may differ from the results found on the ORS website. The reasons for the differences include the following: a) students listed for a school that did not participate in the test were given the lowest score and included in the novice category by the OPI for official calculations, but the ORS system did not include them, b) students taking the alternate assessment were included in the OPI calculations, but not in the ORS numbers, and c) students taking the test that were not enrolled for the entire academic year are included in the ORS and not in the OPI calculations. Since most of the data is found on the ORS website, that is the data analyzed in this report. The OPI was planning to release the official results in mid-July, but is now planning for late August or September. When the OPI does release the official data, this report will be updated with the official proficiency compared to the ORS proficiency in both math and ELA.
